

A FEASIBILITY REPORT ABOUT MY SCHOOL WEBSITE DEVELOPMENT PROJECT FOR TALENTS COLLEGE MUKONO.

Introduction:

The objective of this project is to design a static website for a school in my area as part of the Web Development coursework as instructed by my trainer at Sai Pali Institute of Technology . The school I chose is Called Talents College Mukono located in Mukono District, Nabuti Village.

School Research and Findings:

I found this school easier to access because it is my former secondary school, so I had to walk around the neighborhood and contact the school physically. I simply decided this school because the school setting is local and they had no existing website, all they had was a google address.

Data Collection and Results:

This is the information I gathered from the internet. I used the internet because the school administration is not helpful at all and there is less communication between me and the school.

General Information: The name of the school is Talents College located in Mukono. Mission is Power of Knowledge. I also got their badge and used as logo. This school is a day and boarding mixed school with both A and O level. It was founded in 2007.

Academic & Administrative Data: The school ranges from Senior One to Senior Six. They offer both sciences and arts for both levels.

Contact Information: Contact information includes +256 703 933118 / +256 773 331357 as phone numbers. Official Email: info@talentscollege.ac.ug. Social media @talentscollegemukono on Facebook.

Feasibility Analysis:

The school is not cooperative because I talk to the Director of Studies via WhatsApp but instead, he just views and replies when he wants. The school also has protocols of not allowing outsiders to enter the school. However, am ready to submit the website to them on completion.

There are necessary tools and skills in HTML and CSS code to help me with my project for example internet, help of my web development teacher and assistance from Artificial Intelligence.

Recommendation:

The Institution and Administration should check for contact information of the school on the project letters and talk to them so that they can cooperate with the student handling the project at their school so as to proceed immediately with the website wireframe and design.

Conclusion:

Based on a few gatherings of all necessary text, images, and administrative data, this project is feasible and can be done regardless the time and the less cooperation with the school.
